Software Engineer with 6+ years building the tools and platforms that engineering teams depend on. Specialised in platform engineering and developer experience — Go backends, Kubernetes infrastructure, CI/CD workflows, and internal tooling. Track record of shipping production systems that reduce friction, accelerate delivery, and raise the engineering floor for the teams around me, owning solutions end to end from design through production operations.

PROFESSIONAL EXPERIENCE

Upvest

Jan 2026 – Present

Berlin, Germany · remote

Software Engineer — Engineering Enablement

- Implemented feature-flag infrastructure enabling safe, incremental rollout of new capabilities, reducing incident mitigation time from hours to ~10 minutes when a flagged feature needs to be rolled back.
- Built the infrastructure and tooling to make load testing a standard part of the developer workflow.
- Integrated Claude Code into the daily development workflow, accelerating problem-solving and delivery.

Spreadgroup

Dec 2021 – Dec 2025

Leipzig, Germany · hybrid

Software Engineer

Apr 2024 – Dec 2025

- Built internal developer tools in Go, simplifying complex infrastructure interactions across engineering teams, such as Kubernetes, ArgoCD or Vault.
- Owned the design and maintainability of an internal Backstage software catalog serving ~100 engineers, establishing it as the source of truth for service ownership, dependencies, and relationships across the org; published custom plugins and open-source contributions adopted by external teams.
- Migrated release processes from manual deployments to a fully automated GitOps setup with Kubernetes and ArgoCD, eliminating manual steps from the release pipeline and improving reliability.

Junior Software Engineer

Dec 2021 – Apr 2024

- Initiated the internal Backstage implementation, delivered improvements across existing tooling, and contributed to migrating QA systems, resulting in a 10x more stable on-demand testing environment for engineering teams. Promoted to Software Engineer in April 2024.

University of Vigo

Feb 2020 – Nov 2021

Vigo, Spain

Software Developer — Research & Development

- Migrated internal applications to hexagonal architecture in Go, improving modularity, testability, and maintainability.
- Built signal-processing pipelines in Python and shipped a voice assistant deployed aboard a Navy vessel.

Muutech Monitoring Solutions

Jun 2019 – Jul 2019

Vigo, Spain

Software Developer Intern

- Prototyped anomaly-detection algorithms for industrial IoT sensor streams using Python and R.

SKILLS

Backend

Go, Python, Node.js

Frontend

TypeScript, React, JavaScript

Platform & DX

Kubernetes, Backstage, ArgoCD, Docker, Linux, Vault

Observability

Datadog, Grafana, Prometheus, Elasticsearch, Kibana

Data

PostgreSQL, MySQL, MongoDB

Tools

Git, Claude Code, Linear, Jira

EDUCATION

B.Sc. Telecommunications Engineering — Telematics

University of Vigo · Vigo, Spain
Aug 2016 – Jul 2020

Software Development — Erasmus+ Exchange

Oulu UAS · Oulu, Finland
Aug 2019 – Dec 2019
